

PROFILE

Unity developer and project lead who takes ownership of unstable systems until they are testable and shippable. Recent work spans host-authoritative Photon Fusion gameplay, zombie navigation recovery, in-editor rhythm chart tooling, and online player progression. Comfortable moving between gameplay code, QA evidence, Git integration, and team coordination.

TECHNICAL SKILLS

Gameplay systems	C#, Unity 6, state machines, ScriptableObjects, async scene flow, object pooling
Network and AI	Photon Fusion 2 Host Mode, RPC authority, late join/reconnect, A*, NavMesh, behavior trees
Delivery	Editor/PlayMode regression tests, Windows/Android builds, GitHub issues/PRs, conflict-safe integration
Presentation	URP, shader-driven visibility, animation, audio sync, Canvas UI, After Effects

SELECTED PROJECTS

Fragments of Survival
Team Lead / Unity Developer

Mar 2026 - Present
*Unity 6, C#, Photon Fusion 2, A**

- Own stabilization and delivery for a seven-contributor isometric survival game spanning solo play and Photon Fusion Host Mode.
- Moved story checkpoints, loot, and siege rules behind host authority; validated RPC sources and reconciled state for late-joining players.
- Reworked zombie recovery around blocked corners and thin walls, then locked the behavior down with focused Editor and PlayMode regression tests.
- Built local-only presentation for indoor fog, player X-ray, corpse display, and zombie audio while keeping replicated gameplay state clean.

Project Beat - Mobile Rhythm Game
Project Manager / Unity Developer

May 2026 - Aug 2026
Unity 6, C#, URP, iOS/Android

- Led a 21-member team as project manager and Unity developer; set collaboration standards and kept Git/PR integration moving.
- Turned manual chart authoring into an editor pipeline for BPM detection, beat generation, timeline editing, osu!mania import, and runtime spawning.
- Hardened state across song selection, async loading, hold-note timing, and mobile lane layouts so gameplay survived scene and device transitions.
- Extended the playable loop with store economy, note skins, daily quests, account sessions, and an online leaderboard.

EXPERIENCE

Vietnam Payment Solution JSC - VNPAY
Merchant Sales Representative

2024 - 2026
Can Tho, Vietnam

Worked directly with local merchants from prospecting through onboarding and support. The role built practical habits that now carry into game teams: clarify the real problem, communicate trade-offs, follow through, and close the loop.

EDUCATION

FPT Polytechnic College, Can Tho
Game Programming

Final GPA: 3.75/4.00

Completed all coursework and graduation project. Final average: **8.8/10**.
Coursework applied through team projects in C#, Unity gameplay architecture, AI, graphics, audio, and software testing.

RECOGNITION AND DEVELOPMENT

Recognition	Excellent Student, FPT Polytechnic (2025)
Selected certificates	Complete C# Masterclass; GAM109 - C# 2 for Unity; SOF303 - Basic Software Testing
English	Technical documentation reading; basic workplace communication
